

Client-Focused Compliance Services

EnSafe Inc.'s professional trainers have more than 40 years' experience in developing and conducting safety and health training programs. Our diverse client base ranges from a variety of industrial sectors to government contractors.

## CUSTOMIZED TRAINING MATERIALS

Many companies use generic training programs that meet applicable regulatory training requirements. EnSafe's approach, however, is to customize training material to address the specific concerns of your particular facility or group. Our customized training material provides the student with a familiar environment in which to apply the material presented in the course.

Prior to conducting a training course for a client, we do our homework: We review material safety data sheets, process technology, facility layout, and existing company standard operating procedures. Then we're able to modify existing course material to closely mirror the materials, equipment, and conditions the student will encounter in his or her workplace.

## H&S TRAINING COURSES
